# MISSISSIPPI STATE DEPARTMENT OF HEALTH JUN 23 AN 10: 14 BUREAU OF PUBLIC WATER SUPPLY CCR CERTIFICATION

CALL TANKLA SULTE

Town of CALENDAR YEAR 2013

Syhalia

Public Water Supply Name List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. You must mail, fax or email a copy of the CCR and Certification to MSDH. Please check all boxes that apply.

Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other) X Advertisement in local paper (attach copy of advertisement) On water bills (attach copy of bill) Email message (MUST Émail the message to the address below) Other Date(s) customers were informed: / / , / / , / CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used Date Mailed/Distributed: / / As an attachment As text within the body of the email message CCR was published in local newspaper. (Attach copy of published CCR or proof of publication) Name of Newspaper: The South Reporter Date Published: 6 / 5 / 2014 CCR was posted in public places. (Attach list of locations)

Date Posted: 5 / 10 / 14 CCR was posted on a publicly accessible internet site at the following address (DIRECT URL REQUIRED):

CERTIFICATION

I hereby certify that the 2013 Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

Name/Title (President, Mayor, Owner, etc.)

6 - 20 - 14 Date

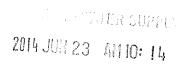

Deliver or send via U.S. Postal Service: Bureau of Public Water Supply P.O. Box 1700 Jackson, MS 39215

May be faxed to: (601)576-7800

May be emailed to: Melanie. Yanklowski@msdh.state.ms.us

#### 2013 Annual Drinking Water Quality Report Town of Byhalia PWS ID #: 0470001 May 2014

1 13.

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Ripley Formation Aquifer.

If you have any questions about this report or concerning your water utility, please contact Samuel Royal at 662.838.2135. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first and third Tuesdays of each month at 6:00 PM at the Byhalia City Hall.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the City of Byhalia have received lower to moderate susceptibility rankings to contamination.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2013. In cases where monitoring wasn't required in 2013, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) — The level of a drinking water disinfectant below which there is no known or expected risk of health MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

				TEST RES	ULTS				
Contaminant	taminant Violation Y/N		Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure- ment	MCLG		MCL	Likely Source of Contamination
Inorganic	Contami	inants							
Inorganic 10. Barium	Contami	inants 2012*	.003	No Range	ppm	2	2	discharge fro	drilling wastes; m metal refineries; tural deposits

14. Cepper	N	2009/1	1*   .1	0	ppm		1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride**	N	2012*	.66	.6166	ppm		4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2009/1	1* 2	0	ppb		0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Disinfectio	n By-	Product	ts						
81. HAA5	N	2013	1	No Range	ppb	0			By-Product of drinking water disinfection.
82. TTHM [Total trihalomethanes]	N	2013	23.1	No Range	ppb	0			By-product of drinking water chlorination.
Chlorine	N	2013	1	.63 – 1.4	mg/l	0	MDI	RL = 4	Water additive used to control

<sup>\*</sup> Most recent sample. No sample required for 2013.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected however the EPA has determined that your water IS SAFE at these levels.

microbes

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

To comply with the "Regulation Governing Fluoridation of Community Water Supplies", our system is required to report certain results pertaining to fluoridation of our water system. The number of months in the previous calendar year in which average fluoride sample results were within the optimal range of 0.7-1.3 ppm was 6. The percentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.7-1.3 ppm was 61%.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791.

Our main goal at the Town of Byhalia is to provide safe drinking water to all of our customers. We have done that by monitoring it daily and treating it properly according to the Safe Drinking Water Act. We also assure that our water is safe by pulling monthly bacteriological samples as well as many other yearly samples to assure we stay in compliance with the Mississippi Department of Health.

<sup>\*\*</sup> Fluoride level is routinely adjusted to the MS State Dept of Health's recommended level of 0.7 - 1.3 mg/l.

## PROOF OF PUBLICATION

714 JUN 23 AH 10: 14

### STATE OF MISSISSIPPI MARSHALL COUNTY

Personally appeared before me, the undersigned Notary Public in and for said County and State, Barry Burleson, who, after being duly sworn, deposes and says that he is the editor and publisher of THE SOUTH REPORTER, a newspaper published weekly in the City of Holly Springs, in said County and State; that said newspaper has been established in said city for more than 12 months, and has since its said establishment been regularly published in said city; and that the\_ Byhalia Water Association a true copy of which is hereto attached, was published for 1 consecutive weeks in said newspaper as follows: VOL. NO. DATE 2014 149 2014 2014 2014 2014 Signed: Sworn to and subscribed before me this 16 day of June 2014.

### 2013 Annual Drinking Water Quality Report Town of Byhalia

PWS ID #: 0470001

May 2014

We're pleased to present to you this year's Annual Clustly Water Report. This report is designed to inform you about the quality water and services we deliver to you water day. Our constant goal to provide you with a sale and dependable supply of directing water. We want you to undestand the efforts we make improve the account of the constant goal to provide you with a sale and dependable supply of directing water. We want you to undestand the efforts we make the improve the account of the constant goal or provide you with a sale and dependable supply of directing the quality of your water. Our water source is from waite drawing from the Figure Formation Aquifer.

at our PM, at we dyname On Their.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its chicking water supply to identify the contamination. A report confishing detailed information on how the susceptibility determinations were made has been furnished to our public contamination. A report confishing detailed information on how the susceptibility determinations were made has been furnished to our public and is available for releving upon request. The wells for the City of Byhalia have received lower to moderate ausophibility rankings to confamination.

and is available for visewing upon request. The wells for the Gity of Byhalia have received lower to moderate susceptibility rankings to contamination.

We routinely monitor for constituents in your drinking water according to Federat and State lews. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31s, 2011. In cases where monitoring water floquities of 1201, the table reliable to meet require the subsequence of the subsequen

In this table you may find many terms and abbreviations you might not be familiar with. To help you better understand these ferms we've provided the following defining the familiar with the provided that the familiar with the fa

Action Level - the Concentration of a contaminant which, it increased, triggers treatment or other requirements which a water system must follow.

Action Level - the Concentration of a contaminant which, it increased, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - A treatment - the Assimum Allowerf (MCL) is the highest level of a contaminant in display water. MCLs are set as close Maximum Contaminant and using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The Goal' (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to Maximum Residual Distinctant Level (MACLG) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant level (MACLG) - The level of a dishining water distinct the level (MACLG) - The level of a drinking water facinity water there is no known or expected risk of health. MRQLGs dishining water distincted the benefits of the use of claimfectants to control microbial contaminants.
